Presentation Strategies and Tools

UCLA Research Workshop Series Summer 2020

Anthony Caldwell
Death by powerpoint
High-rise construction is considered the achievement of the industrial age, yet more than 2,000 years ago the ancient Pharos Lighthouse towered 129 meters over Alexandria, equivalent to a 42 story modern building. Compared to earlier lighthouses, the Alexandrian project of the third century BC represented a significant leap in architectural design, engineering and construction technology, acknowledged as one of the seven wonders of the ancient world. Faced with scant archaeological evidence, conflicting texts, and schematic pictorial representations, scholars have long argued over the design and appearance of the lighthouse. This research draws upon the historical data, but takes as its primary basis a close analysis of the structural challenges of the project. Based on the tenets of experimental archaeology, the resulting new digital reconstruction posits a technologically realistic result, calibrated and tested using engineering software. The process analysis underscores the notability of the achievement. The Great Pyramid of Giza built two millennia earlier was taller, but as a solid structure with little habitable space, it relied on simple compression. Building of the pyramid was an impressive achievement, yet its engineering was quite ordinary. The lighthouse of Alexandria responded to the new programmatic needs and scientific knowledge of the Hellenistic period. With this project, the Egyptians erected a towering multi-story stone building with multiple interior chambers, thus displaying a more complex understanding of structural forces. The solution was a series of post and beam stories, stacked with column and bearing members aligned in the manner of framed buildings of the modern era.
And produces this:
Better, but is still hard to understand

The Pharos Lighthouse one of the seven wonders of the ancient world.

• More than 2,000 years ago the ancient Pharos Lighthouse towered 129 meters over Alexandria, equivalent to a 42 story modern building.

• Compared to earlier lighthouses of the third century BC, the Alexandrian The Pharos Lighthouse represented a significant leap in architectural design, engineering and construction technology.

• The Great Pyramid of Giza built two millennia earlier was taller, but as a solid structure with little habitable space, it relied on simple compression.

• The lighthouse of Alexandria was a towering multi-story stone building with multiple interior chambers, thus displaying a more complex understanding of structural forces.

• The solution was a series of post and beam stories, stacked with column and bearing members aligned in the manner of framed buildings of the modern era.

• Faced with scant archaeological evidence, conflicting texts, and schematic pictorial representations, scholars have long argued over the design and appearance of the lighthouse.

• This research draws upon the historical data, but takes as its primary basis a close analysis of the structural challenges of the project.
What **should** you do?
“A picture is worth a thousand words”
Within a given circle to inscribe three semicircles, each touching the circumscribing circle, and their diameters forming a regular triangle.

- Draw two diameters, 1-2 and 3-4 at right angles to each other, intersecting in 5.

- Divide the circle into twice as many parts as there are semicircles to be inscribed, beginning at 1.

- Draw diameters 6-7 and 8-9. Connect 2-3, cutting diameter 8-9 in 10, which locates one point of the required triangle.

- With 5 as center and radius 5-10, set off 11 and 12, which when connected form the triangle.

- Draw 10-11, 11-12 and 12-10, giving points 13, 14 and 15, the centers of the required semicircles.
Or Image?
The Picture Superiority Effect
Pictures and images are more likely to be remembered than words
Visual Storytelling
Visualize your content
In General...
Slide design is:

using color, images, and layout in a consistent way to structure information
Use the power of images to:
create slides to help your audience remember and understand
Consistency in the formatting of your slides (colors and fonts)
Integrating: what you Show with what you Say

“The Pharos Lighthouse one of the seven wonders of the ancient world.”
Keep your slides **simple**: (don’t do this)

Focus your audience’s **attention**.

Example:
Fire guts historic home with ties to Mark Twain
In 1857 James Clemens, Jr. commissioned architect Patrick Walsh to design the Greek Revival-style mansion.
James L. Clemens House – City Landmark #44

The James Clemens, Jr. House of 1859-60 is an excellent example of the Greek Revival style. Architect Patrick Walsh is credited with designing the house. One of the unusual features is the extensive use of cast iron ornament on the front facade. It has been said it is the finest application of cast iron on a residential building outside of New York City. Cast iron was usually utilized on commercial structures.

James' nephew Samuel Clemens (Mark Twain) was said to have visited the house on several occasion. James Clemens died in 1878. His heirs sold the mansion in 1885 to the Sisters of St. Joseph, who constructed a large chapel on the grounds in 1896. The Sisters remained there until 1949 when the property was purchased by the Vincentian Fathers and Brothers.

The house was made a City Landmark in 1971 and is located at 1849 Cass.
Highway Projects

Editorial: When property neglect leads to tragedy, who holds owners accountable?
What type of presentation are you giving?

Who is your audience?

How long do you have?

What points do you need to make and their order

Create an outline
Three to five sections

You can reuse sections in other presentations

Break your presentation into sections
Giving the Talk

You are as important as the slides

Image source: https://online.husson.edu
Technology, Entertainment, Design
According to Chris Anderson, the curator of TED, every TED talk starts with an idea:

Image source: http://magazine.ucla.edu
“You have something meaningful to say, and your goal is to re-create your core idea inside your audience’s minds.”
Qualities of Successful TED Talks
Focus on one major idea
Give people a reason to care
Build your idea with familiar concepts
Should you **read** your paper?

### Presentation Strategies and Tools

- **Intro**
- **Who am I and why am I giving this presentation?**
- **What not to do**
  - Death by powerpoint
  - Examples (presentation)
- **What should you do?**
  - A picture is worth a thousand words (image)
  - The Picture Superiority Effect (image)
  - Pictures and images are more likely to be remembered than words
  - Visualize your content
  - In General
  - Slide design is about using color, images, and layout in a consistent way to structure information so others can better understand your work. (image)
  - Use the power of images to create well-designed slides to help your audience remember and understand more of what you say. (image)
  - Consistency in your use of colors and fonts, in the formatting of your slides, and in integrating what you say with what you show on the screen. (image)
  - Focus your audience's attention. Instead of putting up as much information as possible on every slide keep your slides simple (image)
